

SRI SHAKTHI INSTITUTE OF ENGINEERING AND TECHNOLOGY

Autonomous Institution - Sample Syllabus Document

Programme	Selected department
Semester	Selected semester
Course	Selected course title and code
Regulation	R2025

Course overview

This sample demonstrates the format that will be used for department, semester and subject syllabus downloads. The final approved syllabus will include the official course description and academic requirements.

Course objectives

1. Build a strong understanding of the core concepts. 2. Connect theory with laboratory and field applications. 3. Develop analytical, design and professional problem-solving skills.

Indicative unit structure

Unit I - Foundations and terminology. Unit II - Core principles and methods. Unit III - Engineering analysis and tools. Unit IV - Applied systems and case studies. Unit V - Contemporary developments and professional practice.

Learning outcomes

On successful completion, learners will be able to explain key principles, apply appropriate engineering methods, analyse practical challenges, evaluate solution alternatives and communicate technical results.

Assessment pattern

Continuous Internal Assessment: 40%. End Semester Examination: 60%. The final pattern is subject to the approved autonomous academic regulations.

References

Prescribed textbooks, standards, journal articles, software documentation and laboratory manuals will be listed in the approved subject syllabus.

SAMPLE ONLY - Replace with the approved department syllabus PDF when available.
